SpaceAGORA simulation architecture

Source responsibilities in the grouped tree; arrows show runtime flow.

Supporting owners

src/foundation/core/ shared contracts and mathematics | src/foundation/assets/ data lookup
src/orchestration/parallel/ execution routing | src/interfaces/cli/ entry points
src/orchestration/simulation/campaigns/ independent runs | ext/ optional integration
Magnetic and radiation interactions share src/models/dynamics/coupled/perturbations.jl.
HYPR.jl owns search and its adapter; packages/SpaceAGORAHYPR/ only loads that adapter.
