Uninterrupted laser-on duration

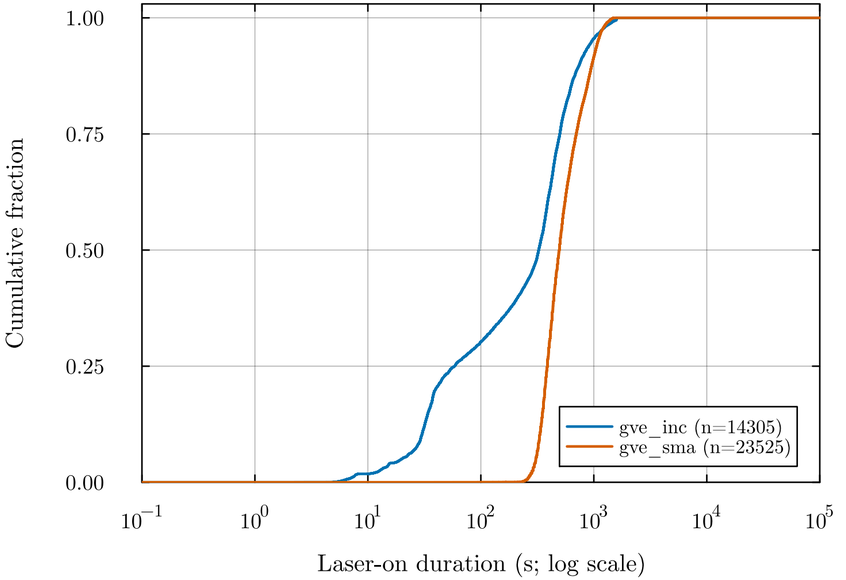

162 cases | 100 initial target periods | target-helper pairs | pooled inclinations and helper counts; schedulers separated

Schedulers normalized separately using shared log-width bins. Blue: gve_inc; orange: gve_sma. Percentages are NOT density per second.

27 / 162 cases never fire: all gve_inc, 9 at each altitude. No artificial zero-duration intervals. Held out-of-range firing included.
