Signed range rate: sampled per-encounter extrema

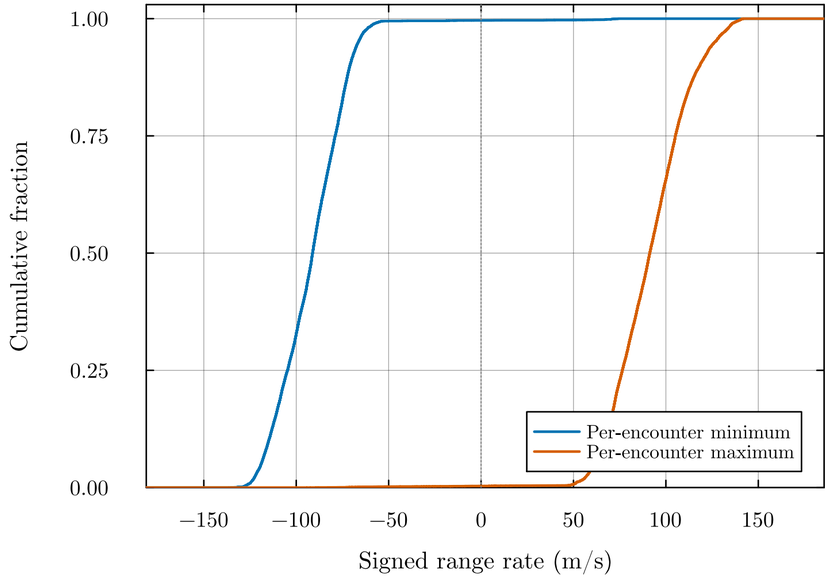

Target altitude: 1000 km
n = 4371; clipped = 287

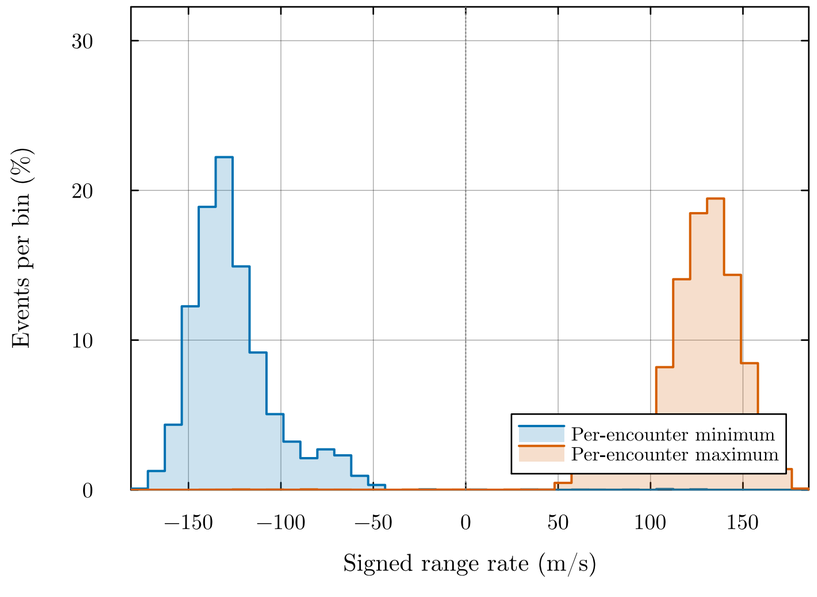

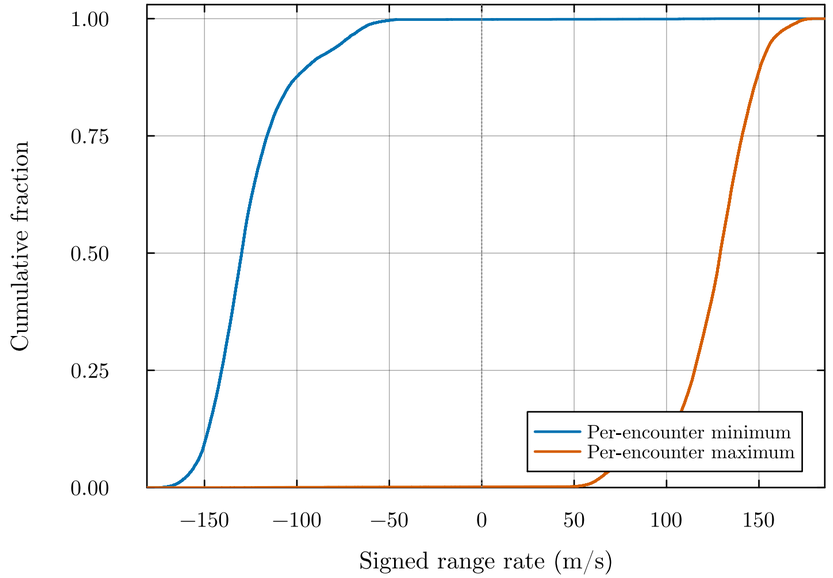

Target altitude: 1050 km
n = 23976; clipped = 348

Target altitude: 1100 km
n = 45783; clipped = 303

162 cases | 100 initial target periods | target-helper pairs | pooled inclinations, helper counts and schedulers

40 shared linear bins; each minimum/maximum distribution normalized separately. Extrema sampled at 10 s plus encounter boundaries.

Negative range rate: approaching; positive: receding. These are distributions of encounter extrema, NOT instantaneous range rates.
